You aim to grow and we aim to turn your vision into a reality with the support of our highly technical and qualified professionals. Connect to us, as we believe that your **"Success Starts Here"**.

### **What drives dentists to opt for digital dentistry?**

The use of CAD/CAM technology can replace traditional prosthesis manufacturing due to its cost-effectiveness, improved predictability, enhanced accuracy, and better efficiency. So far this technology has changed the way the market moves due to the following reasons:

- **Manufacturing made easy:** The maturity in CAD/CAM technology allows the process of making

### **Disaster Recovery for Patient Care is critical, yet Imperative**

Updating your disaster recovery plan is an unavoidable need of today because your patient data, employee records and other important information can be at a risk of loss at all times.

Your full-proof disaster recovery plan should include the following steps:

- **Highlight important records/information and protect them from a disaster risk:** To serve this need, hire services from the

dentures and crowns to be completed quickly. The ability to develop 3D manufactured dentures and crowns within less time, is itself an incentive for the dentists to opt for this technology.

- **Promotes a Patient customized approach:** With CAD/CAM, dentists can customize appliances for their patients in ways not seen possible before. By using software, dentists can develop the desired outcome for braces, dentures or any other appliance required by their patient. On the whole, the use of CAD/CAM allows dentists to offer a better experience of care to their patients.
- **Helps the dentist perform more procedures:** The CAD/CAM technology enables the general dentist to manage those procedures that were once reserved only for the specialists. This in turn, can yield more revenue to their practices.

Time is running fast!!! If you are pondering to buy this technology, contact HTI as we know best how to fulfill the digital needs of your dental office.

### **Evaluate your cyber security under HIPAA before it gets TOO late**

When a hacker has to choose between a large organization and a small healthcare office, the latter is easy prey. Therefore, cyber-attacks are unavoidable and all healthcare professionals need to be prepared to counter them.

accredited service provider who can create customized solutions to not just protect your critical data but also help you retrieve it when a disaster strikes.

- **Remove information gaps and install regular backups:** Data backup systems are a primary requirement of a hospital or a healthcare organization. Data that is a day or even an hour old can literally create the difference between life and death. However, you can easily avoid potential lethal gaps in the information by scheduling routine and regular data backups
- **Update, review and test your disaster recovery plan:** Don't think that your disaster plan will remain 100 % functional and effective only because you started it that way. An internal system or configuration error can occur anytime, which requires you to remain in touch with a reliable solution provider who can regularly test and monitor your disaster recovery plan and keep it running smoothly.

Consider working with HTI when you feel the need for upgrading your disaster recovery plan, as we can offer you secure

**How can I protect my dental office's data under HIPAA?** Encryption is a basic requirement for you in order to protect your data. Your computers in office should be accessed with individual usernames and passwords should be updated after every few months.

Even though, cyber security may not seem to be a top priority for many healthcare providers, it is still necessary to secure their office's data and to remain up with the HIPAA regulations. The potential costs associated with cyber threats, including the fines, penalties, investigation costs and legal fees are all that these providers would have to bear in case of a data breach. So to play it safe! Install email encryption service, firewalls and use recommended software acquired by a reliable IT service provider like HTI.

facilities, expertise in healthcare information, management , and proven data protection services with 24/7 back-end support.

## **News Buzz!!!!**

*Every now and then HTI comes across a great vendor or a great service that we would like to share with our customers. Recently, we made some pretty significant changes to the HTI benefits program for our employees. It was a change that brought us significant savings in our health insurance as a company; but more importantly, we hardly made any sacrifice in our coverage and program options. Following is a short note from the company that assisted us in doing it:*

### **HEALTH INSURANCE WITHOUT THE PAINFUL COSTS**

**By James Fasanella, Assistant Vice President, FNA Insurance Services, Inc.**

As the cost of providing health benefits has climbed, small business owners have struggled to find affordable health coverage their employees need. I am here to tell you that while it might seem like a losing battle, there are great, cost-conscious health plan options available for your practice.

HSA-eligible Plans are a very popular option with businesses of all sizes. HSA-eligible Plans offer lower monthly premiums through eligible higher deductible health plans.

What make these plans popular are the affordable premiums and use of an HSA (Health Savings Account). An HSA is a special bank account that allows participants to save money – pre-tax – to be used specifically for medical expenses incurred, helping to offset the higher deductible. The money in an HSA rolls over every year and can also gain interest. By pairing a qualifying high-deductible health plan with an HSA, participants can save money on their health care.

One of the best-kept secrets utilized by successful small businesses is a Professional Employer Organization (PEO). A PEO combines the collective purchasing power of multiple companies, therefore offering quality health insurance and benefit plans at a significant savings to small business owners. In addition, PEOs not only offer employee health insurance plans, they also provide HR services, including payroll and administration, employee retirement benefits, workers' compensation insurance, state and federal compliance issues and even worker training.

These are only two examples of the many affordable health benefits plans and services available. FNAs experienced, professional broker partners can get your practice into the right health plan at the right cost.
